

- ICFR's Information Policy is developed to safeguard ICFR and stakeholder information and provide a framework for authorised use. This includes appropriate storage and archiving of data; availability and integrity of information; protection against unauthorized access or misuse; security of confidential information; compliance with regulatory, contractual, and legal requirements; and appropriate disposal of obsolete information.
- ICFR's operating model includes a record of research and technical output, clearly distinguishing open and restricted access reports in accordance with research project agreements defining Intellectual Property (IP) ownership and reporting of project output.
 - Peer-reviewed scientific papers are important for the reputation of the ICFR and the individual researcher and so, where possible, this public-domain reporting avenue is utilised with project consortia consent. Popular, layman articles in trade magazines or other media are other useful open-access marketing and technology transfer opportunities.
 - ICFR technical reports that are not suited to peer-reviewed publication have a distinct applied value and provide useful research or technical information, which may include a synthesis of work with significant insight or recommendations. The level of access for these reports is project dependent with reference to research project agreements. Project Quarterly Reports are confidential client reports describing activities and progress against work plan and may include preliminary results. Project Proposals, Best Operating Practice Documents and Event Proceedings are additional documents produced at the ICFR for internal use.
- All users of ICFR information through ICFR's library, website, network, business, or other sources must understand and respect the confidentiality and IP agreements in place for such information and its related projects and stakeholders, as well as relevant legislation protecting information.
- All personal information acquired by the ICFR or its stakeholders in terms of employment or business use must be managed and used with reference to ICFR's Privacy Statement and the Protection of Personal Information Act No. 4 of 2013 (POPIA) to ensure the privacy and integrity of private and sensitive information.
- Access to ICFR's Library (physical or website E-Library) requires a registration and authentication process to ensure appropriate access to information. Information supplied to the ICFR in the registration process is referenced to research agreements, funder approvals and POPIA. Registrations are reviewed annually against employment and student status.
